

Task & Resource Tracker

Ideal for businesses that provide on-demand services, the AT&T Task Tracker application from Metropark is an enhanced resource management solution that brings advanced project tracking functions and an intuitive interface for optimal efficiency.

See Worker Availability

With our sophisticated GPS technology, you will know the real-time location of your crew and be able to view their availability and work in progress.

Assign Jobs Within Seconds

Using our cloud-based Task Tracker app, you can send activities to mobile workers, based on their geographical position and workload straight from your smartphone. Workers can accept or reject job requests remotely, seeing specific instructions and addresses on their mobile device, and provide visibility on all active or pending jobs assigned to them.

Time Management

With special Activity Notifications, your crew can receive Time to Leave and Travel Time alerts to help better organize their day and manage their activities more effectively.

Supported Devices

The Task Tracker app is available in iTunes and GooglePlay, and runs on both Android and Apple smartphones.

Accommodate Changing Priorities

With the helicopter view on all in-field activity, you can adapt to fluctuating business agendas and make on-demand decisions by connecting with resources immediately.
