Metropark

Private Wireless Networking

Solving Bandwidth & Remote Issues

To cover longer distances or extend a network to another location, Metropark's Private Wireless Networking, Point-to-Point (PtP) and Point-to-Multipoint (PtMP) is perfect for your solution. Our radios use antennas that have higher gain and are very directional which greatly improves longer range connections. Once your Private Network is extended to your other area(s), you can use that as private or public Internet access for your staff and customer access.

Metropark provides you with a total wireless campus or citywide solution including WiFi, Mesh, Fixed Wireless, Wireless Broadband, Point to Point, Point to Multi-Point, and AirFiber.

Short, Medium & Long Distances

- **0 to 5km**
- **5 to 15km**
- **15 to 200km**
