

Case Study – Faith Fellowship

Faith Fellowship Church seamlessly integrated UniFi’s comprehensive networking, security, and communication solutions to elevate their ministry and operations.

Background

Faith Fellowship Church, near Roanoke, Virginia, has grown significantly from its modest beginnings. With a diverse and vibrant community of over 1,100 members, their ministry actively engages with the local area through various outreach programs. Their technology infrastructure needed a comprehensive upgrade to support their expanding ministries, weekly services, and critical operational requirements.

Ministry Objectives

- Stewardship
- Reliability
- Safety and Security
- Operational Continuity

Why UniFi

UniFi uniquely met Faith Fellowship's stringent requirements through several key advantages:

License-Free Platform: Eliminates ongoing licensing fees, aligning perfectly with the church's stewardship values by maximizing their technology budget.

Reliability & Performance: UniFi's hardware and software ecosystem provides enterprise-grade performance, ensuring stable, continuous uptime crucial for services, streaming, security, and daily operations.

Ease of Management: UniFi's intuitive "single pane of glass" management simplifies administration tasks. Staff and volunteers without formal IT training can efficiently manage network, security, and communication solutions.

Integrated Platform: Seamlessly integrates networking, surveillance (Protect), door access control (Access), and communication (Talk) solutions. This reduces complexity and streamlines operations.

Network Infrastructure (UniFi Network)

Faith Fellowship implemented a robust UniFi network anchored by the UDM Pro SE (Dream Machine Pro Special Edition), chosen for its comprehensive, integrated management capabilities. This powerful gateway runs network applications, Protect, Access, and Talk seamlessly from a single platform, simplifying deployment and maintenance.

Enhanced Security with UniFi Protect

Faith Fellowship Church heavily relies on UniFi Protect for campus-wide security. They implemented a comprehensive surveillance system using 55 high-quality UniFi cameras managed via the powerful Enterprise Network Video Recorder (ENVR).

Faith Fellowship Church exemplifies how UniFi's integrated, license-free, and easy-to-manage technology can profoundly enhance ministry operations, maximize stewardship, and ensure the safety and connectivity of its growing congregation. Partnering with IT4 Nonprofit, they demonstrate the power of innovative, cost-effective technology to transform and elevate ministry impact.
