

Say Good-Bye to Your Analog POTS Lines

The analog phone line that Alexander Graham Bell patented back in 1876 may still be in use in your business today. Often called POTS (Plain Old Telephone Service), this technology has become outdated, and most businesses have already moved away from it. If you haven't made the switch yet, now is a great time to do so.

Below is an image of a huge and expensive modern cellular/data-based POTS replacement device that delivers analog service over other networks. At Metropark, we offer cost-effective solutions that can replace all your aging POTS-dependent equipment — while helping your company save significantly on monthly expenses.

NOT SO COOL!

- ✓ Analog POTS is dying quickly but as it goes bye-bye, the prices are sky-rocketing
- ✓ All top phone companies are sunsetting and ending their Analog services now
- ✓ Off-brand providers can replace analog POTS using expensive cellular services and your big investment, of course.

Let Metropark show you how to replace your Analog devices with new world technologies.

Fax Machines, Alarm Lines, Credit Card Machines, Elevators, Doorphones, Gatephones, Modems, Paging, Overhead Ringers, Intercoms, Sprinklers, etc.
